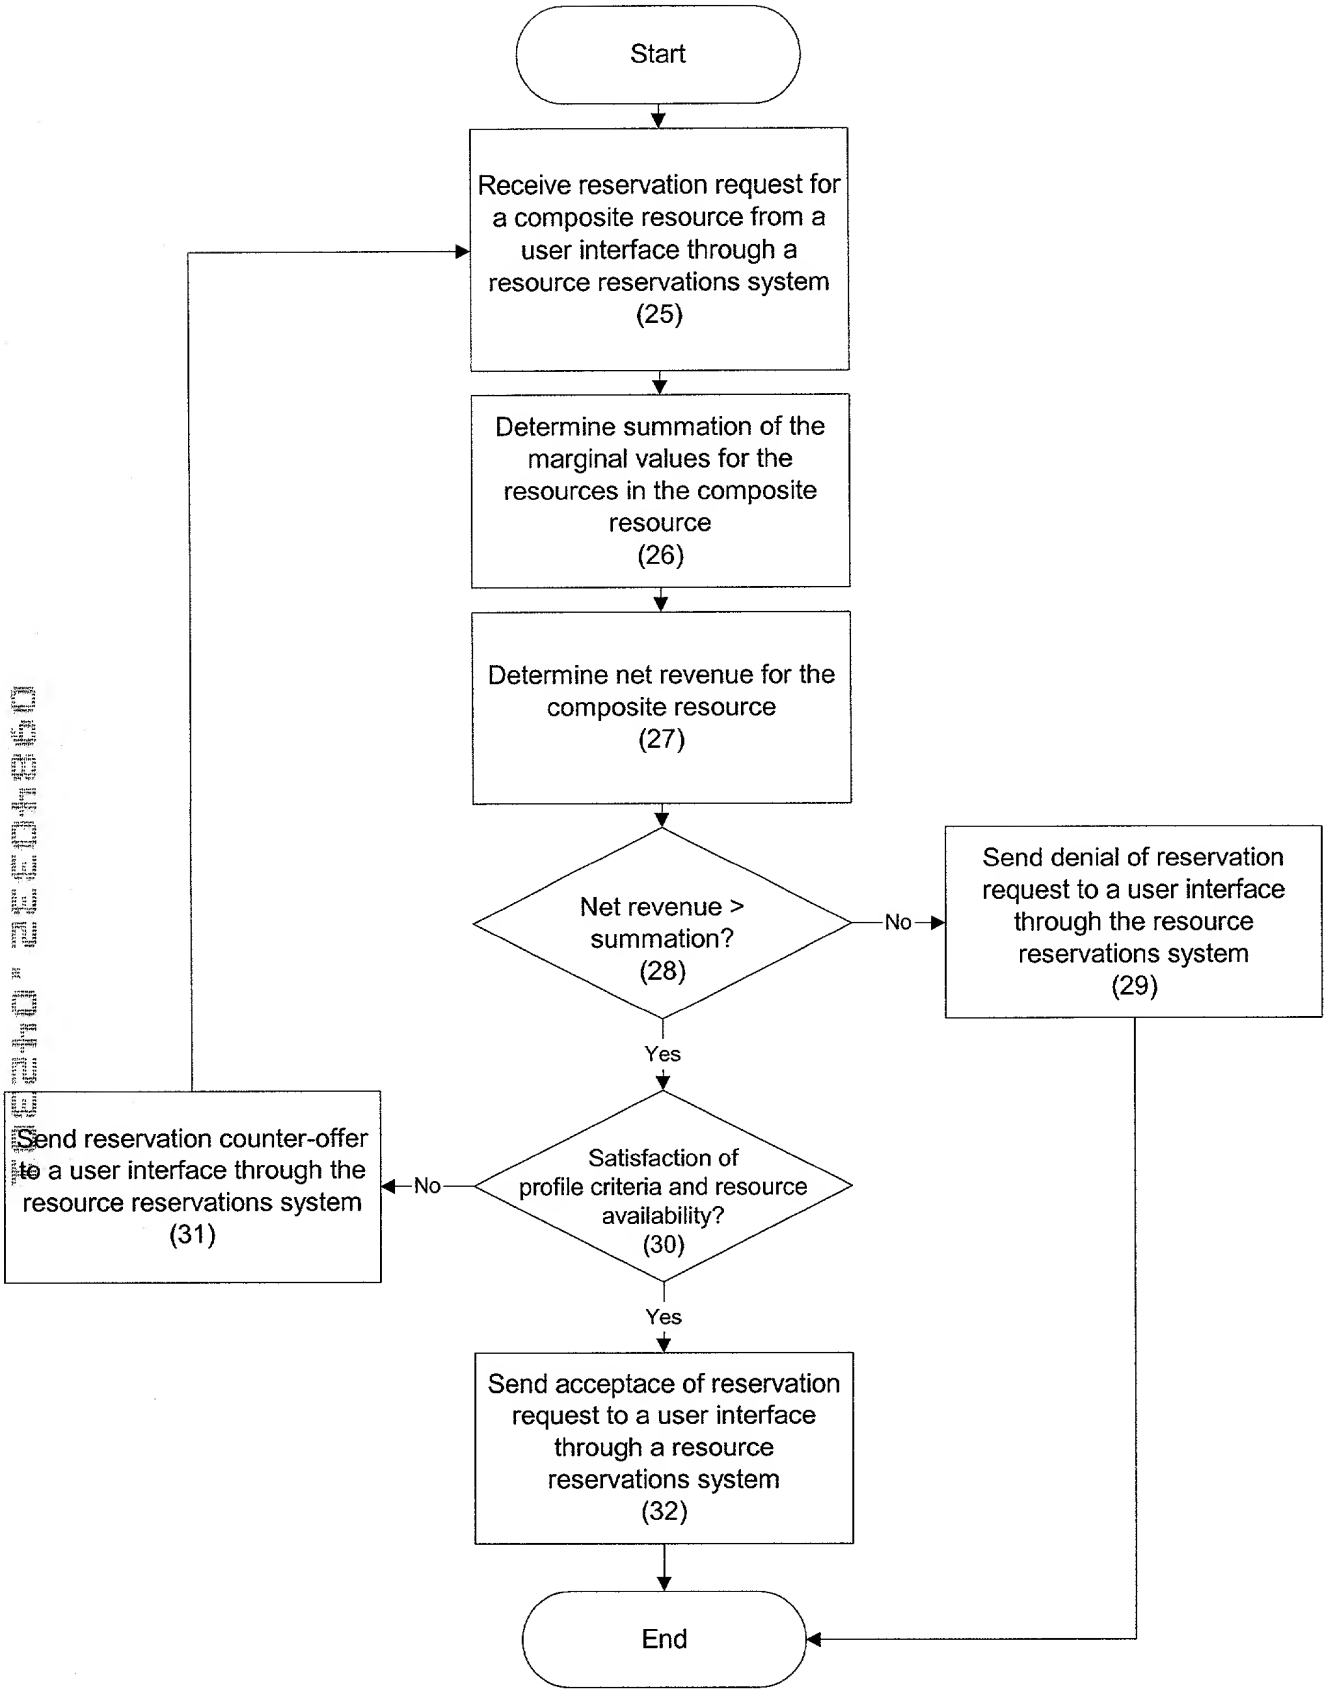
Figure 5



Start
Receive reservation request for a composite resource from a user interface through a resource reservations system (25)
Determine summation of the marginal values for the resources in the composite resource (26)
Determine net revenue for the composite resource (27)
Net revenue > summation? (28)
No
Send denial of reservation request to a user interface through the resource reservations system (29)
Yes
Satisfaction of profile criteria and resource availability? (30)
No
Send reservation counter-offer to a user interface through the resource reservations system (31)
Yes
Send acceptace of reservation request to a user interface through a resource reservations system (32)
End

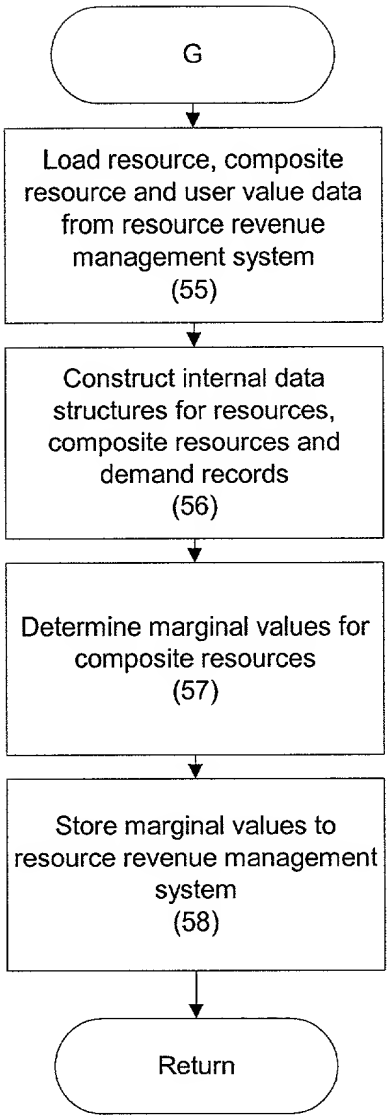
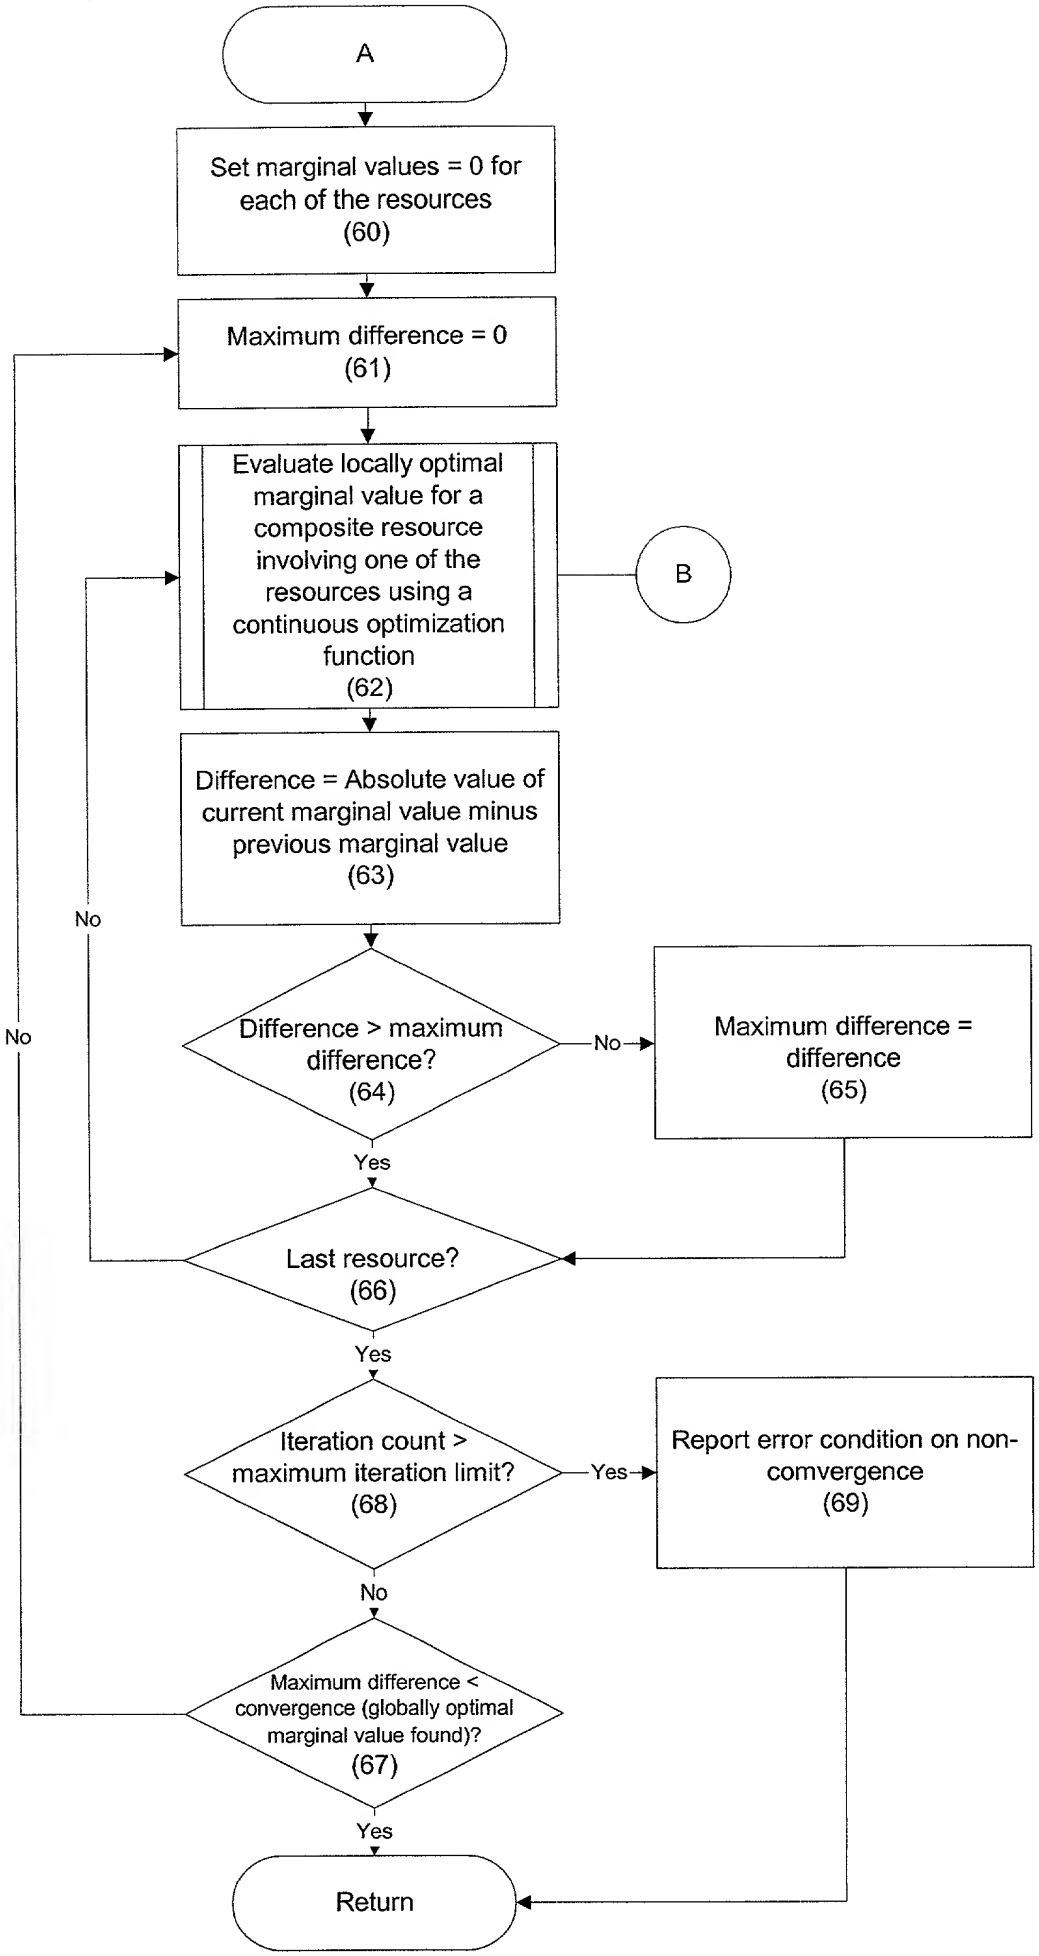
Figure 7



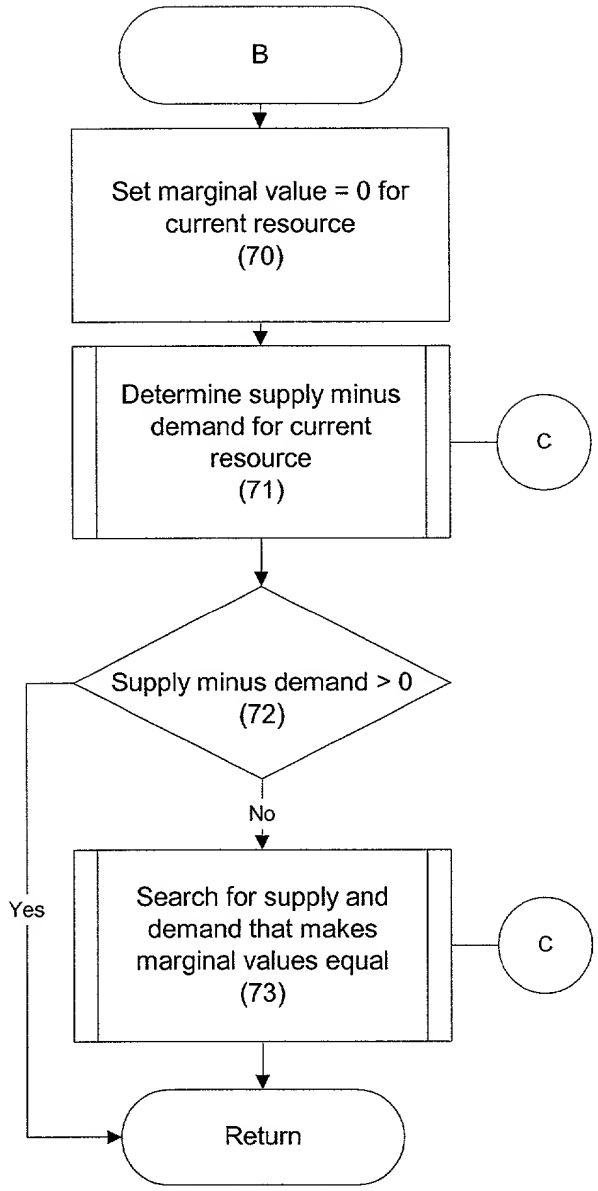
G
Load resource, composite resource and user value data from resource revenue management system (55)
Construct internal data structures for resources, composite resources and demand records (56)
Determine marginal values for composite resources (57)
Store marginal values to resource revenue management system (58)
Return

Figure 8



A
Set marginal values = 0 for each of the resources (60)
Maximum difference = 0 (61)
Evaluate locally optimal marginal value for a composite resource involving one of the resources using a continuous optimization function (62)
B
Difference = Absolute value of current marginal value minus previous marginal value (63)
Difference > maximum difference? (64)
No
Maximum difference = difference (65)
Yes
Last resource? (66)
No
Yes
Iteration count > maximum iteration limit? (68)
Yes
Report error condition on non-comvergence (69)
No
Maximum difference < convergence (globally optimal marginal value found)? (67)
No
Yes
Return

Figure 9



B
Set marginal value = 0 for current resource (70)
Determine supply minus demand for current resource (71)
C
Supply minus demand > 0 (72)
No
Yes
Search for supply and demand that makes marginal values equal (73)
C
Return

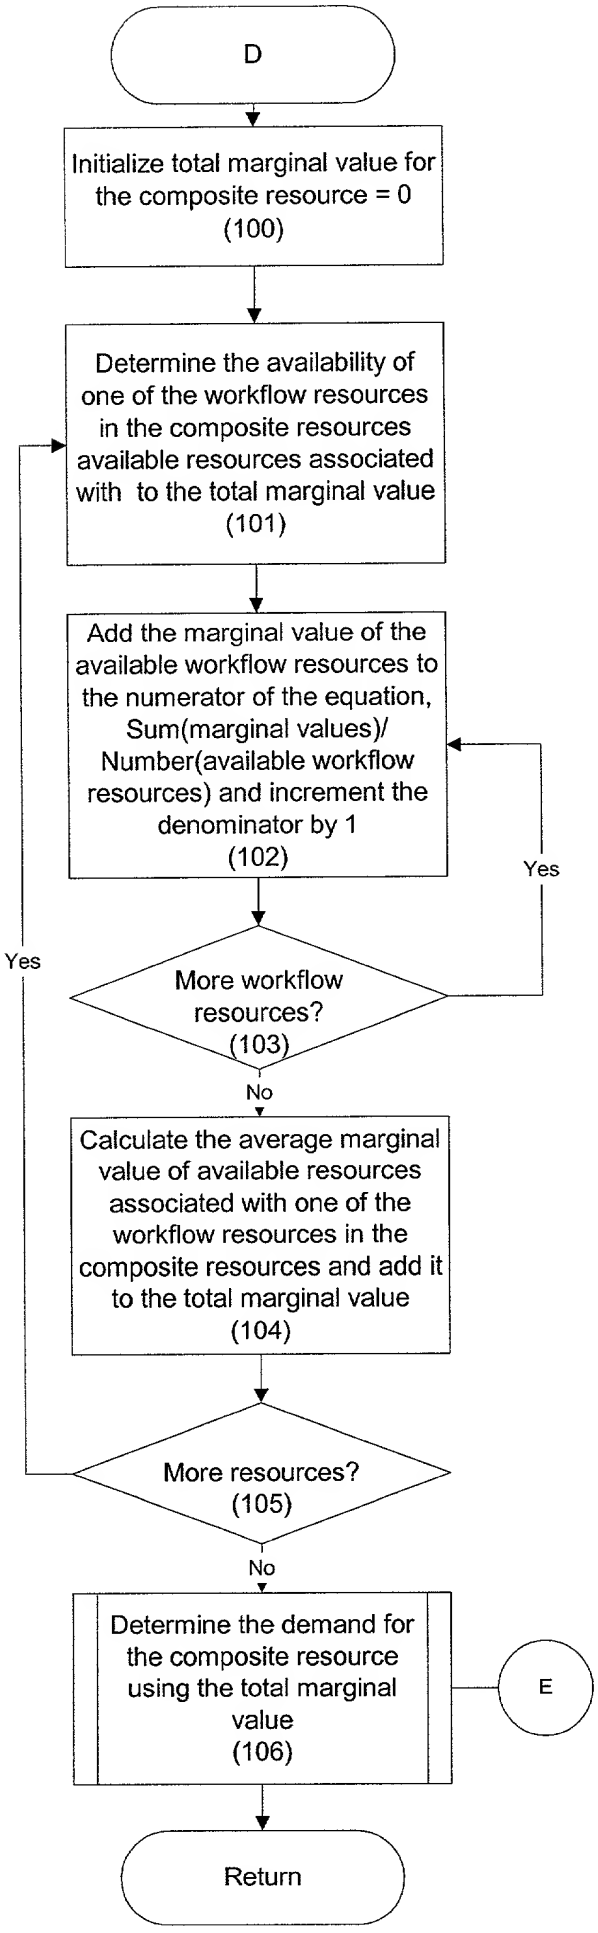
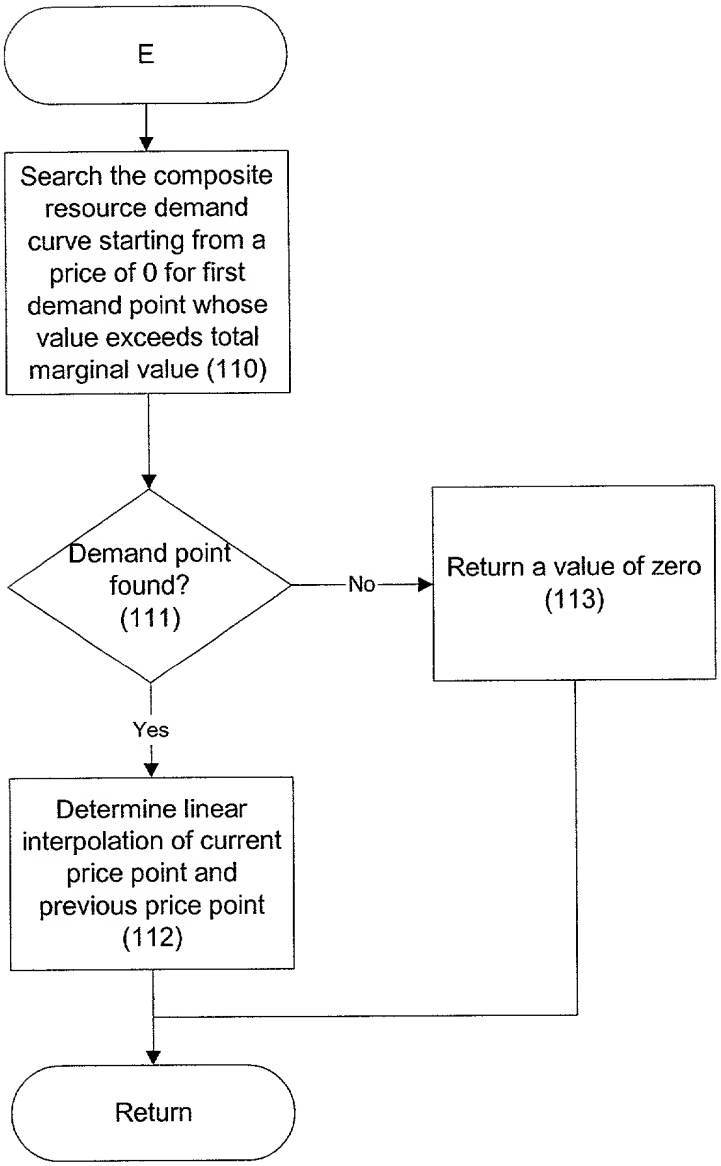
C
Initialize value for current resource = 0
(90)
Determine demand for a composite resource containing the current resource
(91)
D
Add the demand for the composite resource to the demand for the current resource
(92)
Yes
More composite resources?
(93)
No
Return

Figure 12



D
Initialize total marginal value for the composite resource = 0 (100)
Determine the availability of one of the workflow resources in the composite resources available resources associated with to the total marginal value (101)
Add the marginal value of the available workflow resources to the numerator of the equation, Sum(marginal values)/ Number(available workflow resources) and increment the denominator by 1 (102)
More workflow resources? (103)
Yes
No
Yes
Calculate the average marginal value of available resources associated with one of the workflow resources in the composite resources and add it to the total marginal value (104)
More resources? (105)
No
Determine the demand for the composite resource using the total marginal value (106)
E
Return

Figure 13



E
Search the composite resource demand curve starting from a price of 0 for first demand point whose value exceeds total marginal value (110)
Demand point found? (111)
No
Return a value of zero (113)
Yes
Determine linear interpolation of current price point and previous price point (112)
Return

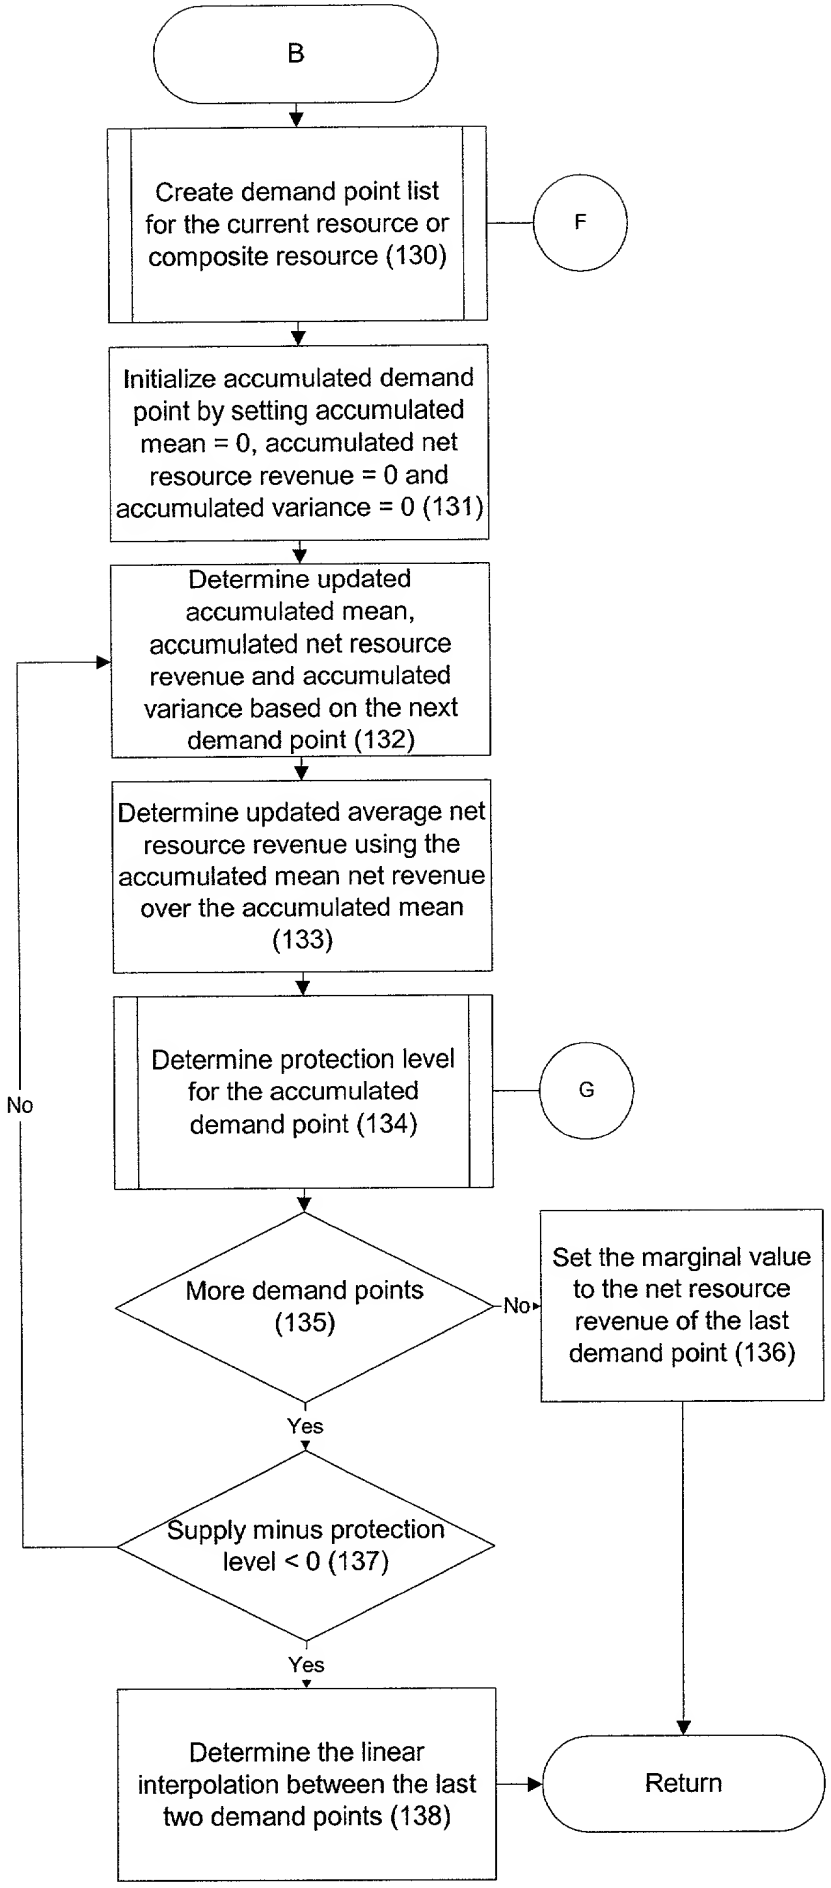
Figure 15



B
Create demand point list for the current resource or composite resource (130)
F
Initialize accumulated demand point by setting accumulated mean = 0, accumulated net resource revenue = 0 and accumulated variance = 0 (131)
Determine updated accumulated mean, accumulated net resource revenue and accumulated variance based on the next demand point (132)
Determine updated average net resource revenue using the accumulated mean net revenue over the accumulated mean (133)
Determine protection level for the accumulated demand point (134)
G
No
More demand points (135)
No
Set the marginal value to the net resource revenue of the last demand point (136)
Yes
Supply minus protection level < 0 (137)
Yes
Determine the linear interpolation between the last two demand points (138)
Return
